

Trauma Opel 4 Network changes

DRAFT 1
11th February 2022

As part of the regional major incident response to a significantly reduced adult critical care capacity at Addenbrooke's Hospital, we will move to a new state at 2100hrs on 11th February 2022.

1. From incident scene –
 - a. All unintubated adult triage tool positive patients to be taken by ambulance crews to the nearest Trauma Unit. Addenbrooke's continues to be the Trauma Unit for local patients.
 - b. Intubated adult trauma patients to be taken to the nearest alternative MTC (or nearest TU if unstable) if within 60mins travel.
2. From Trauma Units -
 - a. Call NCS (0300 330 3999) for transfer decision support as normal. This might be to an MTC out of region.
3. Paediatric patients (up to 16th birthday) to follow the triage tool as normal including scene transfer directly to Addenbrooke's Hospital.

This response will be reviewed daily and updates given via NHSE.
The incident is expected to end on 2nd March 2022.
